EDUCATION

Bachelor of Game Development
Universidade Lusófona / Lisbon, PT
2017–2020

Programming (Highschool)
ESSJT / São João da Talha, PT
2011–2013

SKILLS

Backend:

- C#, .NET (Core, .NET 6+), ASP.NET Core
- Microservices and Monolithic Architectures
- Event-driven systems (Kafka)

Frontend:

- JavaScript / TypeScript (Vanilla JS, jQuery)
- HTML5, CSS
- React

Databases:

- PostgreSQL
- OracleDB
- SQL Server
- MySQL

DevOps & Infrastructure:

- Docker, Docker Compose
- CI/CD pipelines (GitHub Actions)
- Deployment automation

Tools & Practices:

- Git
- Agile / Scrum

Personal:

- Unity Engine

CERTIFICATIONS

- Azure Fundamentals (AZ-900)

LANGUAGES

- Portuguese (C2)
- English (C2)
- Spanish (A2)

WORK EXPERIENCE

[Babel](#) — Lisbon, Portugal

Senior Software Engineer | Mar 2025–Present

- Developed and maintained dozens of .NET APIs within a large-scale, event-driven microservices architecture.
- Designed and optimized production-ready database queries with a strong focus on performance, scalability, and reliability.
- Built and owned resilient .NET background jobs consuming Kafka topics, implementing retry strategies, retry topics, and dead-letter queues.
- Ensured coexistence between legacy and new platforms, handling in-flight requests during a phased migration to a new system.
- Created and maintained shared NuGet packages used across multiple microservices, including common libraries and a resilient Redis access layer.
- Acted as technical lead for the backend team, delegating tasks, coordinating work, and unblocking developers.
- Stepped into architectural responsibilities, contributing to system design decisions and participating in cross-team architecture discussions.

[Capgemini](#) — Lisbon, Portugal

Lead Software Engineer | Jan 2024–Mar 2025

Software Engineer | Mar 2023–Dec 2023

- Designed and optimized .NET APIs serving large datasets, enabling responsive, user-driven data manipulation in a JavaScript frontend.
- Optimized a critical .NET API endpoint aggregating data from multiple tables, reducing response time from ~16s to ~0.3s for thousands of records.
- Led frontend development efforts, building dynamic interfaces and improving complex data visualizations.
- Refactored core application components to improve performance, scalability, and long-term maintainability.
- Defined coding standards, led code reviews, and coordinated sprint planning and reviews within a Scrum framework.

[Easylab](#) — Lisbon, Portugal

Software Developer | Jan 2021–Dec 2022

- Developed educational and gamified experiences in Unity, including browser-based games and an interactive book application.
- Created a cross-platform interactive book application using C#, supporting Android, iOS, and Web.
- Integrated backend APIs to store user progress, scores, and application data.

[HEI-Lab](#) — Lisbon, Portugal

Software Developer | Mar 2020–May 2021

- Developed VR-based cognitive rehabilitation experiences in Unity, including tools to capture and analyze biometric signals for behavioral research.
- Built a .NET MVC web application exposing APIs for storing and retrieving biometric data, along with a data access and download interface.
